Conjunct characters:

A simple conjunct is typed by pressing | x | between the consonants.   e.g. | n || x || n | → adjacent न्न

A joined conjunct is typed by pressing | x || x | between the consonants.   e.g. | n || x || x || n | → न्न

A non-joined conjunct is typed by pressing | shift x | between the consonants.   e.g. | n || shift x || n | → न्न

Alternative: To change one type of conjunct to another, press the backtick | ` | key after it.

e.g. न्न | ` | → न्न | ` | → न्न | ` | → न्न

Dependent/Independent Vowels:

The keyboard will normally produce independent vowels, except after consonants, when it will produce independent vowels.

e.g. | i | → इ | g || i | → गि

To force an independent vowel after a consonant, press | a | after the consonant.   e.g. | g || a || i | → गइ

Alternative: To change one type of vowel to the other, press the backtick | ` | key after it.  e.g. गइ | ` | → गि | ` | → गइ

Alternate forms:

In addition to altering conjuncts and vowels, the backtick | ` | key can produce changes like these:

e.g.   ४ | ` | → **4**   toggle digits: script ⇔ roman

" | ` | → "   toggle smart quotes on/off

Alternate characters:

Various related characters can be obtained by pressing the same key again without pausing.

e.g. | n | → न | n | → ण | n | → ऩ | n | → ঞ | n | → ङ

If you actually want a sequence of the character, either pause or press | a | in between.

e.g. | n || n | → ण | n || a || n | → नन

Smart Quotes:

Press the single quote | ' | or double quote | " | key again to switch between left and right smart quotes. e.g.

" | " | → "

Brackets:

Press the open or close parenthesis key up to 3 more times to obtain alternative forms of bracketing.

e.g.   (| (| →] | (| → } | (| → ⌋

Note to Advanced Users:

If you need an independent ZWJ or ZWNJ character (very rare), type | space | followed by | x | or | shift x | respectively.
